

SuperCure and SuperCure-Q[®]

Light-Activated, Deep Curing Core Buildup Material

Core Buildup in 60 Seconds or Less with SuperCure[®].

The easiest way to speed up your core buildups

SuperCure[®] Natural .25g Tip

SuperCure[®] Natural in EZ[™] Gun

Single-dose. Great price. Problems solved.

With SuperCure and SuperCure-Q, no mixing or automix nozzles are required. Simply inject directly into the prep and build a high strength core in 60 seconds or less. SuperCure and SuperCure-Q are light-activated core buildup materials packaged in single-dose pre-filled tips. The non-slumping formula eliminates the need to use a matrix and the translucent material cures deep with any light source.

Features:

- Fast light-activation and high depth of cure - 8.9mm in 40 seconds
- Single-dose, prefilled syringe tips for maximum asepsis
- Non-slumping formula so there is no need to use a matrix
- No automix nozzles
- Available in two shades - natural and contrast
- Radiopaque

SuperCure – The original barium borosilicate glass filler that cuts like dentin.

SuperCure-Q – Reinforced formula of quartz class filler that cuts harder than dentin.

SuperCure and SuperCure-Q®

Light-Activated, Deep Curing Core Buildup Material

6-Step Guide To Building A Void-Free, Bonded, Composite Post & Core

1. Prepare the tooth. Bevel the edges to eliminate sharp angles.

2. Etch the post hole, rinse thoroughly and dry.

3. Apply bonding agent according to manufacturer's instructions.

4. Insert prefilled SuperCure tip to the bottom of the prep and inject a 2mm layer of material. Cure with light for 20 seconds.

5. Continue building up the core by injecting and slowly withdrawing the tip.

6. Light activate for 40 seconds and then cut and shape the core. The result is a solid, securely bonded post and core.
