

# QuickmatFLEX

## sectional matrices

*new!*

enjoy the  
elastic  
memory

### Advantages

Ultra-thin 0,03mm.  
Facilitated insertion in narrow  
interproximal spaces, allowing  
to obtain anatomically correct  
restorations and tight contact  
points

Improved elasticity.  
Easy to handle and adapt

Excellent resilience and elastic  
memory. Matrices resist  
deformation thanks to their  
elastic spring back

Time-saving solution.  
Restored anatomies require  
fewer finishing steps

Ideal for both posterior and  
anterior restorations

Enjoy the elastic memory

## Testimonial

*"The unique properties of QuickmatFLEX sectional matrices are a real game-changer for my daily restorations, not only in posteriors, but especially for anteriors. Their ultra-thin thickness and superior elastic memory make QuickmatFLEX a cost-effective and time-saving solution that delivers predictable, anatomically correct results with tight contact points. It is the best matrix for any clinician."*

Dr. Jordi Manauta,  
Italy

## Excellent elastic memory and resilience

comparison between QuickmatFLEX sectional matrices and stainless steel sectional matrices

QuickmatFlex sectional matrices

Stainless steel sectional matrices

QuickmatFLEX are ultra-thin (0.03mm) titanium sectional matrices of excellent elastic memory. Easy to handle, they offer the right balance of flexibility and stiffness for optimised positioning and adaptation in tight interproximal spaces. Thanks to their reduced thickness and improved metal alloy, the matrices resist deformation as they feature spring back into the original shape. Class II treatments with QuickmatFLEX sectional matrices and our sectional matrix rings result in predictable restorations with anatomically correct anatomies, tight contact points and smooth composite surfaces that require minimal finishing steps.
